WORK EXPERIENCE

Place Coordinator (July 01, 2022 - Present)
DataBase Team member

EDUCATION

GGSIP University (August 01, 2021 - Present)
B.Tech, Computer Science Engineering 8.6

PROJECTS

Chat web app (December 01, 2022 - Present)
Messaging Web App

A chat web app using Firebase as the backend service and database is built with Next.js for the frontend. It involves setting up Firebase for real-time database storage and user authentication. The app utilizes the Chat Engine API for chat functionality, while Next.js provides server-side rendering (SSR) and static site generation (SSG) capabilities. Real-time updates are enabled through Firebase's real-time features, ensuring the UI reflects new messages and user presence.

Tic Tac Toe
Game
To create a tic-tac-toe game using JavaScript, HTML, and CSS, you'll design a grid layout in HTML, apply styles with CSS, and handle game logic in JavaScript. Add event listeners to track player clicks, update the game board, and check for wins or draws. Alternate the current player after each move and display messages when the game ends.
